

1- A students JSON file is located here:

```
const STUDENT_URL = "data/students.json";
```

2- We ask **AXIOS** to get the content of this file :

```
axios.get(STUDENT_URL).then(afterStudentRequest);
```

3- After reading the file , **AXIOS will call** the function afterStudentRequest

4- Complete this function to display the list of students and the properties in the HTML

The list of students will be in the property **data** of the response !

```
. name : Molika Heng  
  nickname : Kaka  
  class : WEP A  
. name : Vun Yin  
  nickname : YinYin  
  class : WEP A  
. name : Dyna Chhan  
  nickname : Dynastar  
  class : WEP B  
. name : Lyhuoy In  
  nickname : huoy-huoy  
  class : WEP B
```
