

For this exercise, you can have a look at this : <https://genderize.io/>

We will use this API to get the GENDER of someone, using his/her name:

`https://api.genderize.io/?name=clement`

name
You want to get
the gender for

You will get a answer, as a JSON objet:

```
{  
  "name": "clement",  
  "gender": "female",  
  "probability": 0.99,  
  "count": 165452  
}
```

From this data you need to display on the <p> of the body : `clement is a female`

Keep the name you want to test in a variable, so that you
Can change it and test many names
