

1- Install the extension **REST Client** in VSCode:

HOW TO TEST  
A GET REQUEST ?

2- Create a file **test.rest** and write:

```
test.rest
```

```
GET https://jsonplaceholder.typicode.com/posts
```

3- Click on **send request**

```
Send Request  
GET https://jsonplaceholder.typicode.com/posts
```

4- You can see the **response data structure**

```
{  
  "userId": 1,  
  "id": 1,  
  "title": "sunt aut facere repe  
rovident occaecati excepturi optio  
henderit",  
  "body": "quia et suscipit\nsus  
recusandae consequuntur expedita e  
\nprehenderit molestiae ut ut qua  
am\nnostrum rerum est autem sunt re  
niet architecto"  
}
```

For this exercise, you need to **display the information** you can GET from following URL:

<https://jsonplaceholder.typicode.com/users>

For each user, you **need to display some user information** in a <ul> as follows :
